About Me

Software Engineering student with a strong commitment to delivering societal impact through intuitive and scalable technology. Passionate about uncovering creative, out-of-the-box solutions for real-world problems. Proven track record in technical leadership, full-stack software development, and mentoring students in Java and Python concepts. Aspiring to build a career as a Software Engineer delivering high-performing applications that leave a lasting, positive footprint on the community.

Education

University name 2024 – 2028
GPA: 3.55
Computer Science - Software Engineering

Working / Organization Experiences

Part-Time Laboratory Assistant, BINUS University 2025 – 2026

- **Instructed and mentored 100+ undergraduate students** in fundamental algorithms, data structures, and object-oriented concepts using **Java and Python** across weekly laboratory sessions.
- **Diagnosed real-time coding bottlenecks** and logic errors during practical exams, delivering adaptive debugging strategies that improved overall student assessment completion speed by 25%.
- **Authored case study examination materials** and evaluated automated/manual code submissions to maintain high academic evaluation standards.

Freshman Leader & Partner, BINUS University 2025 – 2026

- **Spearheaded academic and social onboarding for 30+ first-year Computer Science students**, facilitating smooth integration into university life and campus culture.
- **Designed and executed proactive weekly check-in frameworks** to address student pain points, resulting in zero dropouts and 100% successful orientation completion within the assigned cohort.

Project Experiences

GY-O'real, BINUS University Feb, 2026 – Present

- **Architected scalable full-stack e-commerce monorepo** utilizing **Next.js, TypeScript, NestJS, PostgreSQL, Prisma, and Docker**, delivering a relational data foundation and modular API endpoints.
- **Engineered product catalog and API foundation workflows**, connecting modern dynamic storefront components to the backend architecture to achieve seamless data fetching.

Veritas, BINUS University Mar, 2026 – May, 2026

- **Engineered machine learning fake news detector** utilizing **Logistic Regression** classifier with a **Flask API backend** and BeautifulSoup web scraper pipeline.
- **Containerized application architecture using Docker**, facilitating automated setup and URL-based text content extractions for real-time article verification.

Affili.io, BINUS University Feb, 2026 – March, 2026

- **Developed AI-powered affiliate trend intelligence platform** using **Next.js, React, and TypeScript**, deployed directly to **Vercel** production environments.

- **Integrated market trend prediction tools** to assist affiliate marketers in evaluating product opportunities based on real-time data insights.

Food Waste, BINUS University Mar 2026 – Jun 2026

- **Built website-first surplus food marketplace prototype** leveraging **React, TypeScript, Tailwind CSS, Docker, and Go** to make excess food accessible and reduce food waste.
- **Streamlined user and merchant transaction workflows**, facilitating discounted food listing distribution to drive local environmental impact.

Additional Information

Technical & Soft Skills:

- **Technical:** Java, Python, React.js, Next.js, TypeScript, JavaScript, Node.js, Express, PostgreSQL, Prisma ORM, Tailwind CSS, Git/GitHub, Docker, FastAPI, Figma (UI/UX), C.
- **Soft Skills:** Creative Problem Solving, Analytical Thinking, Leadership, Public Speaking & Mentoring, Cross-Functional Teamwork, Adaptability.

Certification:

1. **Introduction to Cloud (CC0101EN)** , Cognitive Class (provided by IBM) October 5, 2026
